

UAT Checklist — REQ-039

What's being tested: When you do an inventory count and find some stock missing, the system now tells you **how much money** the missing stock is worth.

Issue: #88

Date: 2026-05-17

UAT site: <https://wawagardenbar-uat.up.railway.app/>

Tester: _____

Time started: _____ **Time finished:** _____

Before you start — read this once

1. **Open a Word document** called `REQ-039-UAT-Evidence-<your-name>;-2026-05-18.docx`. You'll paste screenshots into it as you go. Use the Part headings in this checklist as headings in your Word doc.
2. **Screenshot tool:** Windows → `Windows + Shift + S`. Mac → `Cmd + Shift + 4`. Paste with `Ctrl + V` / `Cmd + V`.
3. **Log in as a super-admin user** at <https://wawagardenbar-uat.up.railway.app/>. If you can't log in, stop and ask the developer.
4. **You'll need one menu item with stock and a known cost-per-unit** (ask the developer to confirm or pick one for you). Note the item name and its cost here:
 - **Item:** _____
 - **Cost per unit (£):** _____
 - **Current stock (system count):** _____

For the example walks below, assume **cost £5 per unit** and **system count = 10**.

Part 1 — See the live "Missing cost" total as you enter counts

What this proves: As soon as you type a count lower than the system count, the screen shows how much money is "missing" — updating live, before you submit.

Step 1.1 — In the sidebar, click **Orders** → **Inventory Summary** (URL ends in `/dashboard/orders/inventory-summary`).

Step 1.2 — The page should list every inventoried item with two columns of numbers: the **system count** and a text box for **staff-adjusted count** (the count the staff member actually saw).

- ☐ **EVIDENCE:** Screenshot the top of the page before entering anything. Paste under "**1.2 — Inventory Summary page (empty)**".

Step 1.3 — Look at the top of the page, above the items table. There should be a panel or row that says something like **"Missing cost: £0.00"**.

- ☐ **CHECK:** A "Missing cost" total is visible.
- ☐ **EVIDENCE:** Screenshot the top panel showing £0.00. Paste under **"1.3 — Missing cost panel visible at £0"**.

Step 1.4 — Find your test item (from "Before you start"). In its **staff-adjusted count** box, type a number that is **3 lower** than the system count. **Example:** if system count = 10, type **7**.

- ☐ **CHECK:** The "Missing cost" total at the top of the page **updates immediately** without needing to click Save. With cost £5 × 3 missing units = **£15.00**.
- ☐ **EVIDENCE:** Screenshot the page showing the updated Missing cost total. Paste under **"1.4 — Missing cost updates live (£15)"**.

Step 1.5 — Change the same item's count to **9** (so only 1 is missing).

- ☐ **CHECK:** "Missing cost" now shows **£5.00** (1 missing × £5).
- ☐ **EVIDENCE:** Screenshot. Paste under **"1.5 — Missing cost recalculates to £5"**.

Step 1.6 — Change it back to **7** (so 3 are missing again).

Part 2 — Submit the snapshot and check the Summary panel

What this proves: After saving, the detail page shows the same missing-cost number.

Step 2.1 — While still on the Inventory Summary page with item count = 7, scroll to the bottom and click **Submit** (or **Save snapshot**).

- ☐ **EVIDENCE:** Screenshot the success message or post-submit page. Paste under **"2.1 — Snapshot submitted"**.

Step 2.2 — In the sidebar, click **Inventory** → **Snapshots** (URL: `/dashboard/inventory/snapshots`). You should see your just-submitted snapshot at the top of the list.

Step 2.3 — Look at the columns in the list.

- ☐ **CHECK:** There is a column called **"Missing Cost"** (or similar), and your new snapshot row shows **£15.00**.
- ☐ **EVIDENCE:** Screenshot the list with your new row at the top. Paste under **"2.3 — Snapshot list shows Missing Cost column"**.

Step 2.4 — Click your snapshot row to open the detail page.

Step 2.5 — Find the **Summary Statistics** card (usually near the top of the page).

- ☐ **CHECK:** The Summary card has a cell labelled **"Missing Cost"** showing **£15.00** (matching what you saw on the submit form in Part 1).
 - ☐ **EVIDENCE:** Screenshot the Summary Statistics card. Paste under **"2.5 — Detail page Summary shows Missing Cost £15"**.
-

Part 3 — Cost-freeze test (the most important check)

*What this proves: Once a snapshot is submitted, changing the item's cost later does **not** retroactively change the snapshot. This is critical for accurate audit trails.*

Step 3.1 — Open a **second browser tab**. In the sidebar, click **Inventory** → find the same test item you used in Parts 1 & 2 → click into it (or its edit button).

Step 3.2 — Find the **Cost per unit** field. Change it from £5 to **£6**. Save.

☐ **EVIDENCE:** Screenshot showing the new £6 cost saved. Paste under "**3.2 — Cost changed to £6**".

Step 3.3 — Switch back to the **first browser tab** showing your snapshot detail page. **Refresh the page** (F5 or Cmd+R).

☐ **CHECK:** The "Missing Cost" cell on the Summary card **still shows £15.00**, NOT £18.00. The snapshot is frozen at the cost that was in place when it was submitted.

☐ **EVIDENCE:** Screenshot the Summary card after refresh. Paste under "**3.3 — Missing Cost frozen at £15 after item cost change**".

Step 3.4 — Go back to the Snapshots **list** page → refresh.

☐ **CHECK:** The Missing Cost column for your row **still shows £15.00**.

☐ **EVIDENCE:** Screenshot. Paste under "**3.4 — List Missing Cost frozen at £15**".

Step 3.5 (cleanup) — In the second tab, **change the cost back to £5** (or whatever it was originally) and save. This restores the test data.

Part 4 — Legacy snapshots show "—" not £0

What this proves: Snapshots submitted before this feature shipped don't have a frozen cost — they show a dash, not a misleading £0.

Step 4.1 — On the Snapshots list page (/dashboard/inventory/snapshots), scroll down to find a snapshot dated **before 2026-05-17**. (Any snapshot from earlier in the year will do. If none exist, skip Part 4 and write "No legacy snapshots available" in your Word doc.)

Step 4.2 — Look at the **Missing Cost** column for that old snapshot row.

☐ **CHECK:** It shows **"—"** (a dash), NOT £0.00 and NOT an error.

☐ **EVIDENCE:** Screenshot the old row. Paste under "**4.2 — Legacy snapshot shows dash, not £0**".

Step 4.3 — Click the old row to open its detail page.

Step 4.4 — Find the **Summary Statistics** card.

☐ **CHECK:** The "Missing Cost" cell shows **"—"**.

☐ **EVIDENCE:** Screenshot. Paste under "**4.4 — Legacy snapshot detail shows dash**".

Step 4.5 — Use your browser's developer tools to check for errors. Press **F12** (or right-click → Inspect) → click the **Console** tab.

- ☐ **CHECK:** There are no red error messages on the page.
- ☐ **EVIDENCE:** Screenshot the Console tab (any blue/yellow messages are OK; only red errors are a problem). Paste under "**4.5 — No console errors on legacy snapshot**".
-

Part 5 — Mixed-discrepancy snapshot (positives ignored)

What this proves: Items where staff counted MORE than the system shows ("over") don't reduce the missing cost — only "missing" (under) items count.

Step 5.1 — Submit a brand-new snapshot. This time:

- Pick **two** items.
- On Item 1: set staff-adjusted count to **system count - 2** (so 2 are missing).
- On Item 2: set staff-adjusted count to **system count + 5** (so 5 are over — a positive discrepancy).

Step 5.2 — Look at the "Missing cost" total on the submit form.

- ☐ **CHECK:** The total reflects ONLY Item 1's missing units (2 × cost of Item 1). The +5 on Item 2 does NOT subtract from the total or add to it. It is ignored entirely.
- ☐ **EVIDENCE:** Screenshot the submit form with both rows filled. Paste under "**5.2 — Positive discrepancies are ignored**".

Step 5.3 — Submit the snapshot. Open the detail page.

- ☐ **CHECK:** Summary Missing Cost matches what you saw on the submit form (positives still ignored).
- ☐ **EVIDENCE:** Screenshot. Paste under "**5.3 — Detail page confirms positives ignored**".
-

Part 6 — Sign-off

Item	Result
Part 1: live missing-cost total updates as you type	PASS / FAIL
Part 2: submit form total matches detail page Summary	PASS / FAIL
Part 3: cost-freeze works — past snapshots stay at £15	PASS / FAIL
Part 4: legacy snapshots show "—" not £0, no console errors	PASS / FAIL
Part 5: positive discrepancies (over-count) are ignored	PASS / FAIL

Tester name: _____

Date: _____

Signature: _____

Overall result (circle one): PASS / FAIL

If FAIL: write below which Part failed and what you saw instead.

What to do when finished

1. Save the Word doc.
 2. Email it to the developer with subject "**REQ-039 UAT evidence — <your name> — 2026-05-18**".
 3. Stop. The developer will record the UAT result on their side.
